

June 08 - Database Schema Creation

Planned Activity

Database Schema Creation

Expected Deliverable

SQL Schema

Status

Completed

Credit Scoring Model Database Schema

Table 1: Users

```
CREATE TABLE Users (  
    user_id INT PRIMARY KEY AUTO_INCREMENT,  
    full_name VARCHAR(100),  
    email VARCHAR(100) UNIQUE,  
    password VARCHAR(255),  
    phone_number VARCHAR(15),  
    created_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP  
);
```

Table 2: Applications

```
CREATE TABLE Applications (  
    application_id INT PRIMARY KEY AUTO_INCREMENT,  
    user_id INT,  
    application_date DATE,  
    loan_amount DECIMAL(12,2),  
    annual_income DECIMAL(12,2),  
    employment_status VARCHAR(50),  
    loan_term_months INT,  
    FOREIGN KEY (user_id)  
    REFERENCES Users(user_id)  
);
```

Table 3: Credit_History

```
CREATE TABLE Credit_History (  
    history_id INT PRIMARY KEY AUTO_INCREMENT,  
    user_id INT,  
    credit_score INT,  
    existing_debt DECIMAL(12,2),  
    payment_history VARCHAR(50),  
    credit_utilization DECIMAL(5,2),  
    FOREIGN KEY (user_id)  
    REFERENCES Users(user_id)  
);
```

Table 4: Payments

```
CREATE TABLE Payments (  
    payment_id INT PRIMARY KEY AUTO_INCREMENT,  
    application_id INT,  
    payment_date DATE,  
    amount_paid DECIMAL(12,2),  
    payment_status VARCHAR(50),  
    FOREIGN KEY (application_id)  
    REFERENCES Applications(application_id)  
);
```

Table 5: Credit_Score_Predictions

```
CREATE TABLE Credit_Score_Predictions (  
    prediction_id INT PRIMARY KEY AUTO_INCREMENT,  
    application_id INT,  
    predicted_score INT,  
    risk_level VARCHAR(50),  
    approval_status VARCHAR(20),  
    prediction_date DATE,  
    FOREIGN KEY (application_id)  
    REFERENCES Applications(application_id)
```

);

Database Relationship

Users

```
|
|----< Applications
|
|----< Credit_History
```

Applications

```
|
|----< Payments
|
|----< Credit_Score_Predictions
```

Submission Description

Database Schema for Credit Scoring Model

The database schema was designed to store user information, loan application details, credit history records, payment transactions, and machine learning prediction results. Primary and foreign key relationships were established to ensure data integrity and efficient retrieval of credit scoring information.
